

Self-operated Temperature Regulators

Temperature Regulator Type 1u

Application

Temperature regulators for cooling installations · Control thermostats for set points from **-10 to 250 °C** · **G ½ to G 1** or **DN 15 to DN 50** · Nominal pressure **PN 25** · Suitable for liquids up to **150 °C** and non-flammable gases up to **80 °C**
The valve opens when the temperature rises.

Conversion of valve sizing coefficients

$$C_V \text{ (in US gallons/min)} = 1.17 \cdot K_{VS} \text{ (in m}^3\text{/h)}$$
$$K_{VS} \text{ (in m}^3\text{/h)} = 0.86 \cdot C_V \text{ (in US gallons/min)}$$

The regulators consist of a globe valve with female thread (G ½ to G 1) or flanged body (DN 15 to DN 50) and a control thermostat, comprising a temperature sensor, a set point adjustment head with excess temperature safety device, a capillary tube, and an operating element.

Special features

- Low-maintenance P regulators requiring no auxiliary energy
- Wide set point range and convenient set point adjustment indicated on a dial
- Globe valves with plug balanced by a bellows (DN 32 to DN 50)
- Suitable for liquids, particularly for cooling media, e.g. cooling water and brine

Versions

Type 1u Temperature Regulators · Type 2121 Valve with G ½ to G 1 female thread, PN 25, unbalanced version or Type 2121 Valve with flange DN 15 to DN 50, PN 25, balanced version DN 32 to DN 50 · Type 2231, 2232, 2233 or 2234 Control Thermostat

For details on the application of the control thermostats, refer to Information Sheet T 2010 EN.

Type 2121/2231 (Fig. 1) · With Type 2121 Valve and Type 2231 Control Thermostat for liquids · Set point adjustment at the sensor · Set points from -10 to +150 °C

Type 2121/2232 (Fig. 2) · With Type 2121 Valve and Type 2232 Control Thermostat for liquids and steam · Separate set point adjustment · Set points from -10 to +250 °C

Type 2121/2233 · With Type 2121 Valve and Type 2233 Control Thermostat for liquids, air, and other gases · Set point adjustment at the sensor · Set points from -10 to +150 °C

Type 2121/2234 · With Type 2121 Valve and Type 2234 Control Thermostat for liquids, steam, air, and other gases · Separate set point adjustment · Set points from -10 to +250 °C

Special version

- Capillary tube 5 m, 10 m, 15 m
- Sensor made of CrNiMo steel
- Capillary tube made of CrNiMo steel or Cu with plastic coating

Fig. 1 · Type 1u Temperature Regulator (valve with female thread) with Type 2231 Control Thermostat

Fig. 2 · Type 1u Temperature Regulator (valve with flanged body) with Type 2231 Control Thermostat

- Version with minimum flow rate
- Plug with PTFE sealing ring
- Valve free of non-ferrous metal
- Version for oil at max. permissible temperature of 220 °C
- Dimensions and materials in accordance with ANSI (see Data Sheet T 2114 EN)

Principle of operation (see Fig. 3)

The regulators operate according to the liquid expansion principle.

The temperature sensor (13), capillary tube (10), and operating element (7) are filled with an expansion liquid. The liquid changes its volume depending on the temperature, causing the operating element (7) and thus the plug stem (5) with the plug (3) of the valve to move.

The position of the plug determines the flow rate of the heat transfer medium across the area released between the plug (3) and seat (2).

The temperature set point can be adjusted with a key (11) to a value that can be read off the dial (12).

Valve

- 1 Valve body
- 2 Valve seat (replaceable)
- 3 Valve plug
- 5 Plug stem
- 5.1 Spring
- 5.2 Balancing bellows
- 6 Threaded nipple with coupling nut

Control thermostat

- 7 Operating element
- 10 Capillary tube connection to the sensor
- 11 Key for set point adjustment
- 12 Set point dial
- 13 Temperature sensor (bulb sensor)

Flange connection				
Immersion tube		Steel	Steel, plastic coated ^{1) 2)}	Stainless steel 1.4571
Flange		Steel, plastic-coated sealing surface		

¹⁾ Plastic coating (up to 80 °C) of PVC or PPH · ²⁾ PTFE version: immersion tube of PTFE; flange: steel with PTFE sleeve

Installation

Valve

Install the valves in horizontal pipelines. The direction of flow must correspond with the arrow on the body. The connecting element must be vertically suspended.

Temperature sensor

The temperature sensor can be installed in any desired position. Nevertheless, its entire length must be immersed in the process medium. Choose a place of installation where neither overheating nor considerable idle times occur.

Capillary tube

Install the capillary tube such that it is not exposed to considerable temperature fluctuations and cannot be damaged. Make sure the permissible ambient temperature range (approx. ambient temperature: 20 °C) is not exceeded. The smallest possible bending radius is 50 mm.

Only use the same kind of materials together; thermowells made of stainless steel 1.4571, for example, can be installed in stainless steel heat exchangers.

Flow rate diagram for water

Valve sizing for other media according to DIN EN 60534, with the terms: $F_L = 0.95$ and $x_T = 0.75$.
The values apply to a fully opened valve.

Fig. 4 · Flow rate diagram for water

Thermowells for Types 2231/2232

Thermowells with threaded and flanged connections

Control thermostat	Type 2231	Type 2232
Immers. depth T2 in mm	325	250

Thermowells for flammable gases (PN 100/PN 63)

Control thermostat	Type 2231	Type 2232
Length L1	mm 315	255
Length L2	mm 340	280

Mounting parts for Types 2233/2234

Clamps and perforated cover for wall mounting

Distance piece

Fig. 5 · Accessories, dimensions

Accessories

Thermowells with threaded or flanged connections for Types 2231 and 2232 Bulb Sensors · G 1 threaded connection, PN 40, of bronze/steel/CrNiMo steel · Flanged connection DN 32, PN 40, with CrNiMo steel/steel immersion tube · Steel immersion tube with PVC/PPH coating, DN 32, PN 40 · PTFE immersion tube, PN 6 (flange PN 40)

Thermowells typetested by **DVGW** (German gas & water assoc.) for flammable gases, G 1 threaded connection, PN 100

Mounting parts for Type 2233 and Type 2234 · Clamps for wall mounting · Perforated cover for thermostat

Distance piece made of brass (for water, steam) or CrNiMo steel (for water, oil, steam)

A distance piece is used in the stainless steel version to separate the non-ferrous metals of the operating element from the process medium flowing through the valve. In addition, it prevents the medium from leaking when the thermostat is replaced. The distance piece is installed between the valve and thermostat.

Dynamic behavior of the thermostats

The dynamics of the regulator are mainly determined by the response of the sensor with its characteristic time constant.

Table 3 (right) lists the response times of SAMSON sensors operating on different principles when tested in water.
