

# Electric Control Valves/Controller with Electric Actuator Types 3222/5757, 3222/5724, 3222/5725

## Single-seated Type 3222 Globe Valve

### Application

Globe valves for heating, ventilation, and air-conditioning.  
DN 15 to DN 50, G ½ to G 1 · PN 25 · Version up to 150 °C  
(for water, oil and other liquids) · Version up to 200 °C (for  
water and steam)

The control valves consist of a single-seated Type 3222 Globe Valve and either a Type 5757, Type 5724 or Type 5725 Controller with Electric Actuator (Type 5725 with safety function).

### Special features

- Single-seated globe valves partly available with balanced valve plugs
- Single-seated globe valves optionally available with welding ends, threaded ends, flanges or screwed ends with female thread as well as with flanged valve body
- Force-locking connection between valve and actuator

### Versions

For DHW heating in instantaneous heating systems and mechanical engineering applications		
Type 3222/5757 · Fig. 1	PN 25	DN 15 to 25 G ½ to G 1
Type 3222/5724	PN 25	DN 15 to 50 G ½ to G 1
Type 3222/5725 <sup>1)</sup> · Fig. 2	PN 25	DN 15 to 50 G ½ to G 1
For heating applications		
Type 3222/5757-7	PN 25	DN 15 to 25 G ½ to G 1

<sup>1)</sup> Electric control valve with safety function

### Register number

The valves mounted on Type 5725 Actuator for fail-safe action "Actuator stem extends" are typetested according to DIN 32730 by the German technical inspectorate TÜV. The register number is available on request.

### Also available:

- Single-seated Type 3222 Globe Valve with electric or pneumatic actuator (refer to Data Sheet T 5866 EN)

Fig. 1 · Type 3222/5757  
(version with welding ends)

Fig. 2 · Type 3222/5725  
(version with flanged valve body)

### Principle of operation (Figs. 3 and 4)

The medium flows through the single-seated globe valve in the direction indicated by the arrow.

The position of the valve plug determines the cross-sectional area of flow released between the plug (3) and seat (2). The plug stem (4) with the plug is attached to the connecting rod of the actuator (10) over a force-locking connection. The valve is opened by the valve spring (5) when the actuator stem retracts. The plug is positioned by changes in the control signal which act on the actuator.

The electric actuator contains a digital controller integrated into the actuator. The controlled variable is recorded over the directly connected Pt 1000 sensor. The output signal of the digital controller acts as a three-point stepping signal on the synchronous motor of the actuator and is transferred over the connected gear as a positioning force onto the actuator stem.

The **Type 5725 Controller with Electric Actuator with safety function** is fitted with a spring assembly and an electromagnet that can be connected to a safety control circuit. When the control circuit is interrupted or the power supply fails, the magnet disengages the gear from the self-locking motor and releases the spring assembly. The actuator is available with fail-safe action "Actuator stem extends". The valve is closed in case of emergency.

Refer to Data Sheet for details	
Type 5757-7	-> Data Sheet T 5757-7 EN
Type 5757	-> Data Sheet T 5757 EN
Type 5724/5725	-> Data Sheet T 5724 EN

### Installation

The control valve can be mounted in any desired position for applications for liquids up to 150 °C; however, the actuator must not be suspended downwards. The version for temperatures up to 200 °C must only be installed with the actuator in the upright position.

In case the valve is to be insulated, the actuator and coupling nut to connect the stems should not be insulated as well. In addition, check whether the permissible ambient temperature cannot be exceeded. If necessary, an intermediate insulating piece must be used; it should only be insulated up to 25 mm.
